

CSE 422

Assignment 1

Name: Fahim Shahriar Ahmed

ID : 22101511

Sec : 12

Answer to the q no - 1

a) $g(n)$ = distance of node 'n' from start

$h(n)$ = manhattan distance

$f(n) = g(n) + h(n)$

A(1,1) B(1,2) C(1,3) D(1,4)
E(2,1) F(2,2) G(2,3) H(2,4)
I(3,1) J(3,2) K(3,3) L(3,4)
M(4,1) N(4,2) O(4,3) P(4,4)
O \Rightarrow Goal

$g(n) = 0$
 $h(n) = 5$
 $f(n) = 5$
top

$g(n) = 1$
 $h(n) = 4$
 $f(n) = 5$
left

left
 $h(n) = 5$
 $g(n) = 2$
 $f(n) = 7$

Right
 $h(n) = 3$
 $g(n) = 2$
 $f(n) = 5$

Right
 $h(n) = 4$
 $g(n) = 3$
 $f(n) = 7$

Goal

~~Right~~ bottom
 $h(n) = 2$
 $g(n) = 5$
 $f(n) = 7$

bottom
 $g(n) = 6$
 $h(n) = 1$
 $f(n) = 1$

left
 $g(n) = 6$
 $h(n) = 1$
 $f(n) = 1$

bottom
 $g(n) = 7$
 $h(n) = 0$, $f = 7$

Goal found

$$F^3$$

$$F^3 \begin{bmatrix} B^5 & E^5 \end{bmatrix}$$

$$B^5 \begin{bmatrix} E^5 & C^5 & A^7 \end{bmatrix}$$

$$E^5 \begin{bmatrix} C^5 & G^5 & A^7 \end{bmatrix}$$

$$C^5 \begin{bmatrix} G^5 & A^7 & D^7 \end{bmatrix}$$

$$G^5 \begin{bmatrix} M^5 & A^7 & D^7 \end{bmatrix}$$

$$M^5 \begin{bmatrix} A^7 & D^7 \end{bmatrix}$$

$$A^7 \begin{bmatrix} D^7 \end{bmatrix}$$

$$D^7 \begin{bmatrix} H^7 \end{bmatrix}$$

$$H^7 \begin{bmatrix} L^7 \end{bmatrix}$$

$$L^7 \begin{bmatrix} K^7 \end{bmatrix}$$

k^7 $\boxed{0^7}$

$\boxed{7^2}$

0^7 $\boxed{}$

GOAL

$\boxed{7^2 \quad 0^2 \quad 3^2}$ 7^2

$\boxed{7^2 \quad 0^2 \quad A^2}$ 0^2

∴ path =>

$(2, 2) \rightarrow (1, 2) \rightarrow (1, 3) \rightarrow (1, 4) \rightarrow (2, 4) \rightarrow (3, 4)$
↓
 $(3, 3)$
↓
Goal: $(4, 3)$

⑥ A heuristic is admissible when, $h(n) \leq g(n)$

here, $h_5(n)$ is most likely one inadmissible as it doubles an admissible heuristic.

$h_9(n)$ can also be inadmissible as it select max heuristic between an admissible and an inadmissible heuristic.

⑦ Among $h_6(n)$ and $h_7(n)$; ~~$h_7(n)$~~ will be more dominant as $h_7(n) \geq h_6(n)$ always.

⑧ According to me, ~~$h_7(n)$~~ $h_7(n)$ will be the best heuristic as $h_1(n)$ and $h_2(n)$ both are admissible and $\max(h_1(n), h_2(n))$ will be taken.

2. True

① always \leq ∞

parent 1: $[1, 2, 3, 4, 5, 6, 7, 8]$

parent 2 : $[3, 1, 2, 8, 7, 6, 5, 4]$

parent 3 : [2, 4, 5, 6, 8, 7, 3, 1]

parent 9 : $[7, 6, 1, 3, 5, 4, 2]$

preferred = +1

avoid 2500 = 1000

neutral = 0

Fitness function = $\sum (\text{Preferred}) - \sum (\text{Avoid})$

1. $f(x) = x^2 + 2x + 1$

for parent 1 $\hat{\theta} =$

[illegible]

$$\text{for parent 2} = 1+0+1+1+1+0+0+1+1+0 \\ + 0+1+1+1+1+0$$

$$= 10$$

$$\text{for parent 3} = 1+1+1+1+1+1+1+0+0+1 \\ + 1-1-1+1+1+1$$

$$= 9$$

$$\text{for parent 4} = 1+0+1+0+0+1+1+1+1+1 \\ + 1+1+1+1+1+0$$

$$= 11$$

\therefore chromosome 2 and 4 are the 2 fittest

③ Regular crossover will not work in this scenario as a guest can only appear once. So, no duplicate value should be available. But in regular crossover duplicate value can be available. so it will not work in this scene

④ A possible mutation can be swap mutation where guests can exchange seats.

Answer to the q no - 3

a True.

As in hill climb algorithm, if plateau is found moving sideways might give us better solutions rather than staying at the plateau.

b True

As simulated annealing depends on temperature value it does not need to have knowledge of the entire search space. It will only move until temperature value is high.

c True.

Normal hill climbing algorithm always goes towards increasing values. If it explored all search spaces it would not ~~have~~ get stuck on local optima, plateaus or ridges.

d False.

Hill climbing is not a path finding algorithm, rather it is an algorithm where path does not matter and only goal matters.

Answer to the q no - 9

a

	x		o
	x		
x		o	o

start 1

x	x		o
	x		
x		o	o

start 2

	x		o
x	x		
x		o	o

start 3

	x		o
	x		x
x		o	o

x	x		o
	x		o
x		o	o

-1

x	x		o
o	x		
x		o	o

x	x		o
o	x		x
x		o	o

0

	x		o
x	x		
x		o	o

o	x		o
x	x		x
x		o	o

1

	x		o
x	x		o
x		o	o

-1

	x		o
o	x		x
x		o	o

x	x		o
o	x		x
x		o	o

0

o	x		o
	x		x
x		o	o

o	x		o
x	x		x
x		o	o

1

start 1

∴ draw

start 2

∴ X wins

start 3

∴ X wins.

∴ In start 2 and 3, X wins. But start 2 has a smaller tree

∴ X ^{wins} should use start 2

⑥
